Talking points for partner reps

# Find the right AI story for any government department

Eight repeatable AI solutions. For each one: the pitch, the numbers you can quote, where we use it today and the other state and city departments it applies to.

Before you pitch

## Five things to keep in mind

What the Partner Day prep calls agreed on.

**Lead with efficiency**

Government buyers weigh efficiency, productivity and security above return on investment.

Patrick, Oct 30

**Say business process automation**

It's the term public sector teams already use and trust.

Patrick, Nick and Tim, Oct 30

**AI supports staff**

Talk about helping the current team, never about cutting jobs.

Nick, Oct 30

**Name the department type**

Say "a state department of transportation", never the agency's name.

Nick and Patrick, Oct 30

**Spell out acronyms**

Say "Department of Social Services", never the letters. Explain it like they're new to it.

Nick, Oct 30

Use cases

## Eight use cases, and where each one can be used

Each use case shows the pitch, where we use it today, the other departments it applies to, the numbers and where they come from.

# Citizen Services AI

**145K**

calls a day at one of our largest agencies

THE PITCH

Most calls to a benefits agency are the same few questions: how do I apply, what do I send, where is my case. Our assistant answers them in plain language, in the caller's own language, and creates the request in the agency's system. Staff spend their day on the cases that need a person.

WHERE WE USE IT TODAY

- State Department of Human Services
- City Department of Social Services Pilot

WHERE ELSE IT CAN BE USED

- State Department of Health
- State Department of Labor
- Department of Motor Vehicles
- Department of Revenue
- Department of Housing and Community Development
- Administrative Office of the Courts
- City 311 Customer Service Center

## The numbers

**145K**
Calls a day at one of our largest agencies

**<5 min**
Wait time goal, down from about 4 hours

**7**
Languages in one state's voice intake

**>85%**
Goal for understanding callers the first time

## How it works

1. Answers residents by phone or chat, in their own language
2. Handles the common questions: how to apply, what to send, where's my case
3. Files the request in the agency's system and passes hard cases to staff

Say it like this

**Most calls are the same few questions. We answer those, so staff can work the cases.**

Why now: from October 2027, states with a Supplemental Nutrition Assistance Program (food assistance) payment error rate of 6% or more pay 5% to 15% of benefit costs.

## Where these numbers come from

**145K calls a day** — Agency call volume
Partner Day prep call, Oct 27 (Amith Kumar). Repeated on Oct 30 · Open source

**Under 5 minutes, from about 4 hours** — Goal
Partner Day prep call, Oct 27. The pilot proposal uses a different baseline: about 51 minutes plus menu time · Open source

**7 languages** — Engagement scope

Permitting and licensing · Government

# Permitting AI

**30 → 3**

days to turn around a permit

THE PITCH

Permits pile up because every application has to be checked against long rulebooks, and only a few senior reviewers know them well. Our AI reads the documents, flags what's missing and sends the file to the right person. The reviewer still makes the call, just much faster.

WHERE WE USE IT TODAY

- State Department of Transportation
- State Division of Parks and Recreation — Pilot

WHERE ELSE IT CAN BE USED

- Department of Environmental Protection
- City Department of Buildings
- Department of Motor Vehicles
- State Department of Health
- Department of Public Works
- Department of Professional Licensing and Regulation
- Office of the State Fire Marshal

## The numbers

**3 days**
Permit turnaround, down from 30 days

**2x**
Permits handled by the same team

**30 min**
Engineering review, down from 3 hours

**30%+**
Fewer errors in submitted applications

## How it works

1. Reads each application and flags anything that's missing
2. Checks it against the rules and sends it to the right reviewer
3. Keeps the full history. The reviewer still makes every call

Say it like this

**Permitting is most of what government does. Everyone needs one, even for an event in a state park.**

One parks team had to chase 98% of its applications for missing details before this work started.

## Where these numbers come from

**3 days, 2x volume, 30 min review, 30%+ fewer errors** — Reported result
Transportation permitting case study · Open source

**98% of park applications needed follow-up** — Starting baseline
State parks special use permit proposal · Open source

Partner Day prep call, Oct 30 (Mal Marpaka) · Open source

Contracts and procurement · Government

# Contracts Intelligence AI

**3 days → 5 min**

to review a contract

THE PITCH

A careful review of a long contract can take two people two days. Our AI checks each clause against the agency's own standards, flags what's off and suggests the fix, with the source shown. Reviewers decide what to accept.

WHERE WE USE IT TODAY

- City Office of the Comptroller — Pilot
- State Department of Information Technology — Pilot
- A university contracts office — Pilot

WHERE ELSE IT CAN BE USED

- Department of Administrative Services
- Department of General Services
- Office of the Attorney General
- State Department of Transportation
- State Department of Health
- Department of Public Works
- Public Housing Authority

## The numbers

**5 min**
Contract review, down from 3 days

**3x**
More contracts reviewed per person

**70%+**
Less manual review work

**2 days**
For two people to review a 30-page contract today

## How it works

1. Reads every clause against the agency's own standards
2. Flags what's off and suggests the fix, showing where it found it
3. Reviewers accept or reject. The AI does the reading

Say it like this

**Every department signs contracts. We take the reading off their plate and leave the decisions with them.**

Review figures come from our contracts customer story. Government accounts here are pilots and active conversations.

## Where these numbers come from

**3 days to 5 minutes** — Customer story
Anonymous contracts success story · Open source

**3x throughput** — Product claim

AI governance · Government

# AI Governance Hub

**1 screen**

for every AI model, user and agent

THE PITCH

Every agency is using AI now, and most can't say who is using it, what it costs or what it can access. The Hub puts usage, spend, permissions and approvals in one place and records every action. Leaders get the audit trail they're asked for, and nobody gets a surprise bill.

WHERE WE USE IT TODAY

- City Office of the Comptroller — Pilot
- Our own AI operations

WHERE ELSE IT CAN BE USED

- State Department of Information Technology
- Office of the State Chief Information Security Officer
- Office of the Inspector General
- Office of the State Auditor
- Department of Budget and Management
- State Department of Health
- State Department of Human Services

## The numbers

| | |
|---|---|
| **1** | Screen for every AI model, user and agent |
| **100%** | Of connected AI spend traced to a user |
| **Zero** | AI changes go live without approval |
| **4** | Areas: change control, security, cost, access |

## How it works

1. Connects to the AI tools an agency already runs
2. Shows usage, spend, permissions and approvals on one screen
3. Records every action, so there's a clean audit trail

Say it like this

**We built it after a surprise AI bill of our own. Every agency running AI has the same blind spot.**

Figures describe the controls the Hub applies to the AI tools connected to it.

## Where these numbers come from

**1 screen, 100% spend traced, zero unapproved changes, 4 areas** — Product claim

AI Governance government deck and product brief · Open source

**Surprise AI bill story** — Quote

Partner Day prep call, Oct 30 (Patrick Martin) · Open source

**Lead with governance** — Guidance

Elevator pitch session, Oct 29 · Open source

Claims and case files · Commercial

## Claims AI

**4 hrs → 10 min**

of daily admin per analyst

THE PITCH

Claims analysts lose hours each day pulling notes, records and letters out of different systems. We put all of it in one place that refreshes every night, with plain-English search and a full audit trail. Analysts spend their mornings on decisions instead of data entry.

WHERE WE USE IT TODAY

- A global food ingredients company — Commercial

WHERE ELSE IT CAN BE USED

- Workers' Compensation Board
- State Department of Labor
- Office of Risk Management
- Department of Veterans Affairs
- State Department of Human Services
- Department of Administrative Services

### The numbers

**10 min**
Daily admin per analyst, down from 4 hours

**3x**
More claims each analyst can oversee

**3 sec**
To find a claim record, down from 15 minutes

**100%**
Of the claims team using it from launch

### How it works

1. Pulls claim records, notes and letters from every system
2. Refreshes every night and searches in plain English
3. Keeps a full audit trail, so analysts spend the day on decisions

Say it like this

**Any agency team juggling claims or case files across systems has this exact problem.**

Commercial example. Results reported by the customer at launch.

### Where these numbers come from

**10 min, 3x, 3 sec, 100% adoption** — Customer reported

Claims customer intake, May 12 · Open source

Resident self-service · Commercial

## Website Concierge AI

**$6 → 2¢**

cost of each conversation

THE PITCH

Most people come to a government website with one question and leave without an answer. Our concierge answers in plain language within seconds, then opens the exact page, form or service they need. Live agents get fewer repeat questions and more time for the hard ones.

WHERE WE USE IT TODAY

- A national roadside and travel club — Commercial
- State Division of Parks and Recreation — Pilot

WHERE ELSE IT CAN BE USED

- Department of Motor Vehicles
- City 311 Customer Service Center
- Department of Revenue
- State Department of Labor
- State Department of Human Services
- State Office of Tourism

### The numbers

**3 sec**
To answer, vs. up to 15-minute waits at peak

**2 cents**
Per conversation, down from about $6

**50K+**
Conversations a month

**1 in 3**
Questions handled by the AI

### How it works

1. Answers website visitors in plain language within seconds
2. Opens the exact page, form or service they need
3. Leaves live agents free for the hard questions

Say it like this

**Built in 8 weeks. We're prototyping the same idea as a trip planner for a state parks system.**

Commercial example. Results reported by the customer. Cost per conversation is their estimate.

### Where these numbers come from

**3 sec, 2 cents, 50K+ a month, 1 in 3, built in 8 weeks** — Customer reported
Travel club customer intake · Open source

**State parks trip planner** — Prototype
Trip planner prototype brief · Open source

Records and research · Commercial

# Document Intelligence AI

**30 → 3**

minutes per research search

THE PITCH

Finding the right document in a big archive usually depends on the one person who has read most of it. Our AI searches the full text, ranks what it finds and explains why each result fits. Staff get an answer in minutes, with the source right there to check.

WHERE WE USE IT TODAY

- A major book publisher — Commercial

WHERE ELSE IT CAN BE USED

- State Archives and Records Administration
- State Library
- Office of Legislative Research
- Administrative Office of the Courts
- State Department of Education
- State Department of Health

## The numbers

**56K+**
Books searchable in full text

**3 min**
Per search, down from about 30 minutes

**~90%**
Less time on each research request

**15+**
Editors using it every day

## How it works

1. Searches the full text and the catalog together
2. Ranks what it finds and explains why each result fits
3. Shows the source, so staff can check every answer

Say it like this

**Any agency sitting on decades of documents gets answers in minutes, with the source right there.**

Commercial example. Results reported by the customer. The 30-minute starting point is their estimate.

## Where these numbers come from

**56K+, 3 min, ~90%, 15+ editors** — Customer reported

Publisher customer intake, Apr 14 · Open source

Defense and inspection · Defense

# AI Quality Inspection

**~10**

critical defect types checked on each round

THE PITCH

Reading X-rays for defects takes trained specialists who are hard to hire and slow to train. Our AI checks every image for the defects that matter most and flags anything that needs a human look. Inspectors spend their time on the items that need them.

WHERE WE USE IT TODAY

A munitions maker supplying the U.S. Army

WHERE ELSE IT CAN BE USED

- U.S. Department of Defense
- State Department of Transportation
- Department of Public Works
- Public Utilities Commission
- State Department of Agriculture

## The numbers

**~10**
Critical defect types checked on each round

**6 months**
To train one human X-ray reader

**$20K**
To train each reader before they work alone

**100%**
Goal for catching critical defects

## How it works

1. Reads the X-ray image of every round
2. Flags critical defects for a human inspector to check
3. Keeps a record of every inspection

Say it like this

**It opens doors outside defense too. Our team used it to start a quality talk with a major automaker.**

Training figures are the customer's own baseline. Accuracy is the project goal.

## Where these numbers come from

**~10 defect types, 6 months and $20K to train, 100% goal** — Customer baseline and goal
